WEEK 7 | TEAM PROJECT · MARKED OUT OF 20 | APPLY | DUE FRI 30 OCTOBER, 23:59

PURPOSE

Finish every public page on your team's list, then style the whole site from **one** `css/style.css` — your own colours and typefaces, laid out with the same Grid, Flexbox and media query you write for the sacco in Lab 2. No page scrolls sideways at any width from 360 px up.

This is part of the team project, which is worth 10% of the unit.

WATCH OUT

Submit on GitHub only. Your work is your team's shared repository, marked as it stands at **23:59 on Friday 30 October**. On Google Classroom, under *Team project — repository*, you share **one thing: the URL of that repository** — for example `https://github.com/your-username/your-project`. No zip files, no screenshots, no attached `.html` or `.css` files, no Drive links. Anything handed in on Classroom other than the repository URL is not marked. If your team already posted the URL in Week 4, check it still opens, and do not post it again.

Thursday — the order of the lab

Time	What you do
First	Lab 2, Parts 3 – 7, on your own sacco site. **Marked in the session** — it comes first.
Once Lab 2 is marked	Sit with your team. Agree the house style (Figure 2), agree who owns which block of the stylesheet (Figure 3), and Member 1 makes the first push.
At home, before 30 October	Each member finishes their own pages and their own block, pulling before and pushing after every sitting.

What you hand in

1. **Every public page on your list, written.** Six to eight pages, the three every team has (`index`, `about`, `contact`) included. Each one has real content — no "coming soon", no lorem ipsum — and the same `header`, `nav` and `footer`.
2. **Every page valid** in the Nu HTML validator.
3. **One stylesheet,** `css/style.css`, linked from every page. No `style="…"` and no `<style>` block anywhere.
4. **Your own house style** — four colours and two typefaces, not the sacco's.

5. **The Lab 2 layout:** the page on a Grid with named areas, the nav a Flexbox row, at least one row of cards (or similar) that wraps.
6. **The phone:** the viewport tag on every page and one media query, last in the file, that makes the page a single column at 700 px and under.
7. **Every member's own commits** in the log, under their own GitHub account.

Pointers

1 · Do not start from an empty file

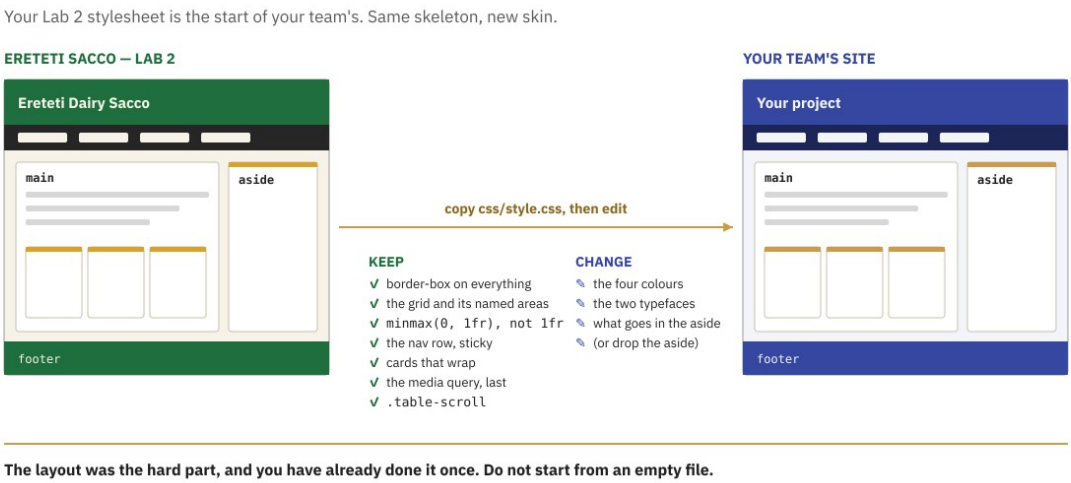

Figure 1 — copy your Lab 2 `style.css` into the team repository, then change only the skin.

Your Lab 2 stylesheet already holds the hard part. Copy it into the team repository's `css/` folder, then change the colours and typefaces. If your pages have no notices, either give the `aside` something useful (opening hours, a helpline, a deadline) or remove `aside` from the grid drawing and the media query.

2 · Choose the house style once

Write the six choices as a comment at the top of `style.css`, so nobody has to guess a colour:

```
/* House style — main #______  ground #______  ink #______  accent #______
   headings: ______, serif    body: ______, sans-serif */
```

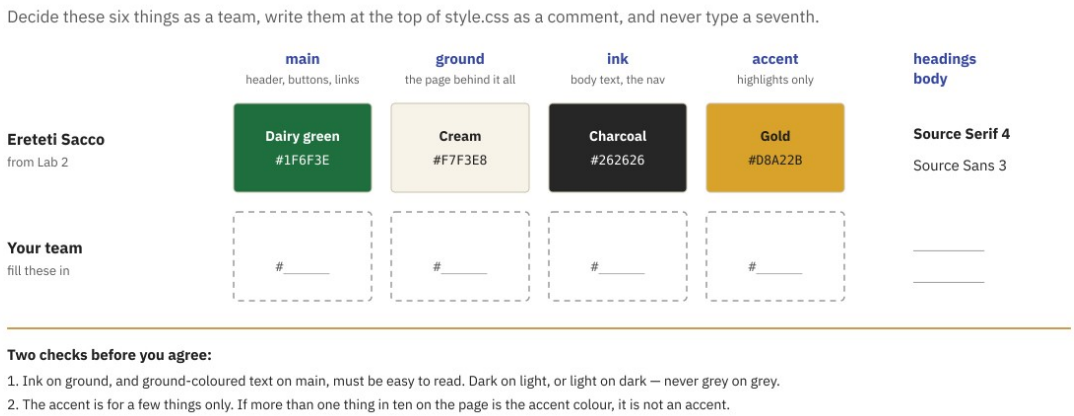

Figure 2 — a house style is four colours and two typefaces, chosen before anyone writes a rule.

3 · Share one stylesheet without fighting Git

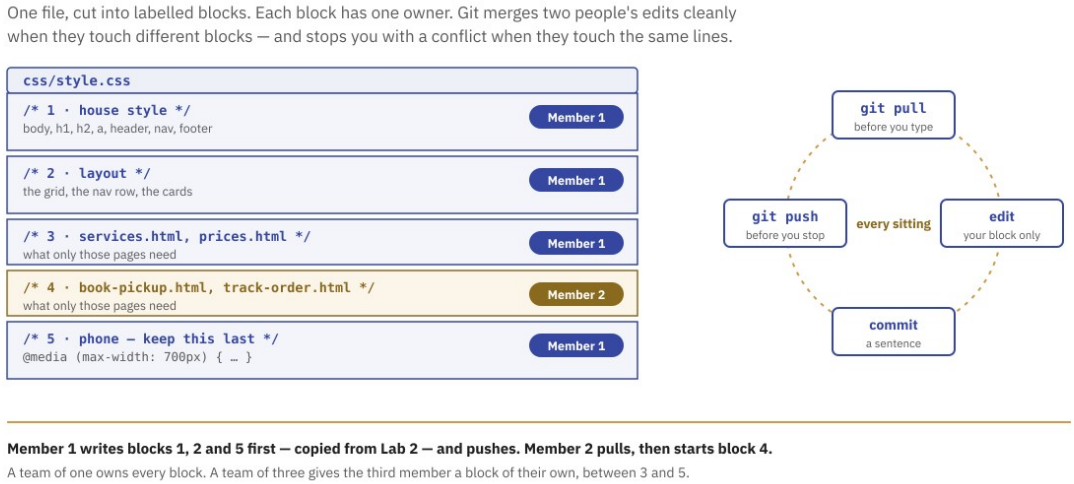

Figure 3 — one owner per block, and the same four steps every time you sit down.

Most teams are two people, so the split is simple: Member 1 owns the shared blocks (house style, layout, phone); each member owns a block for **their own pages**. A rule that only your page needs — your table, your form, your cards — goes in your block, never in someone else's. If Git does report a conflict, stop and fix it together; do not delete the other person's lines to make it go away.

4 · The traps you already know from Lab 2

- `grid-template-columns: minmax(0, 1fr) 18rem;` — a plain `1fr` makes a page with a wide table scroll sideways just above 700 px.
- `img, input, select, textarea { max-width: 100%; }` — or one wide element pushes the whole page sideways on a phone.

- Wrap every table in `<div class="table-scroll">` — the table slides, not the page.
- The media query goes **last** in the file. Above other rules, it loses the tie.
- `Ctrl` + `Shift` + `R` when nothing seems to change.

Test like the marker does: take the corner of the browser window and drag it from wide to 360 px, on every page, watching the bottom edge for a scrollbar.

How the 20 marks are given

Figure 4 — the team's twelve are shared; your eight are yours alone.

	Marks	Full marks	Part marks
TEAM — the same for every member	**12**		
One stylesheet	2	`css/style.css` linked from every page; no inline styles or `style` blocks anywhere	Linked from some pages, or one inline style
House style	3	Four colours and two typefaces, written at the top, used consistently; every text easy to read on its ground	Consistent but hard to read somewhere, or the sacco's colours left in
Grid	2	`body` a grid with named areas; every area placed with `grid-area`	A grid, but areas placed by guesswork or missing
Flexbox	2	The nav a single row with no bullets; at least one row of items that wraps	Only one of the two
Phone	3	Viewport tag on every page; one media query, last; one column at 700 px and under; **no sideways scroll on any page from 360 px up**	Works, but one page scrolls sideways, or the viewport tag is missing from some pages
YOU — each member, on your own pages	**8**		

	Marks	Full marks	Part marks
Your pages	3	Your pages written in full, with the shared `header`, `nav` and `footer`, and valid	Written but invalid, or thin
Your pages styled	3	Your page's own parts — its table, form or cards — styled in your block, in the house style, holding at 360 px	Styled, but breaks at 360 px or ignores the house style
Your commits	2	At least three commits from your own account, each with a sentence for a message	One or two, or messages like `update`

Marks are not given for taste. They are given for one house style applied from one file, and a layout that holds at every width.

> **WATCH OUT**
>
> **No commits from your account, no gold marks** — the team's twelve still count, the eight do not. Commit from your own machine or sign in as yourself on the lab machine; a teammate pushing your work for you is their commit, not yours.

Teams

From the roster, *Labs – DBT 1305*. If your team's line is wrong, or you are not on it, tell the lecturer **on Thursday**, before the lab ends.

Group A		Group B	
A&A	FreeSpot	CAS Team	A+HealthServices
BDKarma	*no project yet*	FundiMtaani Team	FundiMtaani
BEACON	Student interaction system	Herdlink Team	Herdlink Mandera
Dobi Express	Laundry service	Jalvan	Restaurant management system
Fluer	B2B supply chain	KPI Killers	*no project yet*
FreshBytes	*no project yet*	Maraka	ReTech Solutions
GG's	Mental health system	MaziwaRescue Team	MaziwaRescue
GuardLink	Security system	Mesh	MyExpense
HCRST	Health Care Referral System	Mwananchi	Garbage disposal
Mercure Tech	Optiflow	NativeGo	Tourism — tourists and local guides

Group A		Group B	
NFC Team	Smart customer feedback	NovaWorks Hub	Nova Bill
Odysseus	Pick and Go	OGU	DukaTrack
Oppora	Campus Opportunity Hub	ShambaPulse	ShambaPulse
Phantom	*no project yet*	Techtitans	Smart agricultural system
SysCraft	*no project yet*	TerrapH	Soil acidity monitoring
Tara	Flooding and drainage reports	The Elementals	BinGo
TAVO	Transport	The Syndicate	Entrepreneurs' networking
The NATO	TaskFit	VPA Team	Reminder WebApp
The Solution	*no project yet*	WebCore	Medicine barcode verification
Track It	Student financial tracking		

NOTE

A team marked *no project yet* chooses one on Thursday and writes it on the roster before leaving. Its pages are still due on 30 October.

CHECKLIST

Before 23:59 on Friday 30 October:

- Every page on your list exists, has real content, and passes the validator
- Search the repository for `style=` — nothing found
- Your four colours and two typefaces are in the comment at the top of `style.css`
- Every page dragged from wide to 360 px — no scrollbar along the bottom
- `git log` shows commits from every member
- The repository on GitHub, opened in a browser, shows the latest `style.css`
- The repository's URL — and nothing else — is on Classroom under *Team project — repository*
